Regupol® it just feels right

Fitness performance is all about resilience. Bouncing back after a heavy workout. Absorbing the impact. Pushing further to complete one more repetition, lift one more kilo, run one extra kilometre. Such dedication mirrors the resilience of **everroll®** rubber flooring from **Regupol**.

Here is a collection of rubber flooring products which has been working out in Australian fitness and health clubs for more than 20 years. With featured benefits of safety and comfort underfoot everroll® makes for a good flooring choice within leisure and aquatic centres.

everroll® offers six distinctive product ranges, infused with fragments of colour which harmonise with other flooring systems. All of the **everroll®** flooring products are homogeneous, have no wear layer and are PVC free.

Please Note: All images contained in this brochure are for illustration purposes only. Please request a product sample from your Regupol Team Member before making a decision.

everroll® Core is widely used in freestyle training areas

everroll® Core

Our number one

Strength, endurance and good looks; these are the proven qualities of **everroll® Core**. This remarkable flooring solution has been our number one preference of fitness facilities around the world for some very good reasons.

For starters **everroll® Core** is able to sustain high impact and endure heavy duty use. Offering a broad spectrum of colours to coordinate with your corporate colour palette or design theme.

everroll® Core comes in a range of thicknesses matched to suit low impact and high impact activities. Ask us for a colour sample to help select the optimum solution for your environment.

everroll® Tone in free weight areas

everroll® Tone

Added colour for a well toned floor

We've taken our popular everroll® Core and gone even further, as two complimentary colours in each shade set a sophisticated tone to floors. Such an aesthetic could be just the effect you're looking for in adding complexity and character.

Each colour variant comes alive with the colour infusion of quality EPDM rubber particles. When it comes to performance, **everroll® Tone** exhibits the same resilience and resistance to heavy impact as our **everroll® Core** product.

To tone up your floors with added resilience and energy, request a sample today to make an informed selection.

Areas of Application

everroll® Vitality for community and leisure centres

everroll® Vitality

Bring some colour to your feet

With its added infusion of colour **everroll® Vitality** stretches the colour palette without stretching your budget.

The vital ingredient is the combination of equal volumes of EPDM with tough eco-preferred rubber. Such colour intensity can be used to create specific zones or distinguish areas within your fitness facility.

This is a product that offers greater comfort underfoot and performs with impressive grip even when wet.

Ask us for a colour sample and then add some vitality to your venue.

everroll® Intensity around swimming pools

everroll® Intensity

The look of granite, the feel of rubber

With **everroll® Intensity** Regupol has created a floor with a split personality. Intensity evokes the look of granite, yet underfoot it has the feel of rubber.

Your members will have added spring in their step and will feel reassuring levels of grip which is vital for safety. This makes **everroll® Intensity** the flooring of choice for a broad range of leisure facilities and aquatic centres.

When you request a sample, you'll no doubt admire the colour. But take the time to run your fingers across it and feel the resilience.

everroll® Active

Colour you'll feel comfortable with

You seek a flooring solution with a subtle yet sophisticated infusion of colour. Yet that same floor must meet commercial realities and deliver value over the long term and achieve long life. What do you choose?

everroll® Active achieves precisely what the name suggests. It offers the high elastic strength and impact resistance you demand, and has the ability to quell excess noise levels better than timber or vinyl floors. Equally uplifting is a colour selection to compliment your design theme or corporate persona.

Request a sample in your preferred colour and feel the energy return and resilience.

everroll® Shape for custom designed in-lays and vibrant floors

everroll® Shape

Vibrant shades that reshape design

We've amped up the colour for added vibrancy in a flooring solution that will add shape and structure to your floors.

The colour intensity comes from the high percentage of fine particle EPDM rubber granules infused throughout the product.

Such a strong hit of colour could be just what you need to identify specific areas within your gym or leisure facility. You can define a running track, mark and distinguish areas, maybe even integrate your logo into the flooring design. In this way, everroll® Shape can reshape your floors and your facility.

To truly appreciate the vivid colour selection, ask us for a sample or two.

everroll® Composite floors are flexible for use in child care centres

Composite Flooring

Comfortable and flexible rubber flooring systems

Here is a flooring solution that not only ensures comfort. The cushioning effects of **everroll® Composite Flooring** provides many long term benefits.

With a durable wear layer underscored by a shock-absorbent underlay, **everroll® Composite Flooring** provides excellent shock and sound absorbing qualities. Such attributes are vital in environments where active bodies often come in contact with the floor and with high impact.

The two layered system comprises of a shockpad installation with the wear layer applied on site to achieve an evenly bonded and durable surface.

Ask today for a sample and feel the difference.

Regupol® Underlays reduce noise and vibration

Noise and Vibration in Gyms

Why do I need to minimise noise and vibration?

For each specific gym location, a detailed review of the relevant Government, Council and Strata laws will need to be considered to determine how much impact noise is considered appropriate for your building. Failing to do so can be a costly exercise and can result in costly disputes with neighbours and authorities. Taking the time to research and test your particular building will ensure that the most appropriate solution is found. Reducing any disruptions made with your gym fit-out and ensuring a happy and safe environment for all.

Acoustic Disturbance From Gyms

The dropping of free weights or other hard and/or heavy objects onto the floor are activities most likely to generate acoustic disturbance. Pin and plate loaded equipment produces similar disturbances, of slightly lesser magnitude. Weight lifting platforms and associated dropping of loaded bars onto these platforms, typically causes the highest level of acoustic disturbance from gyms.

Location Specific Critical Factors

The degree of acoustic disturbance may differ significantly from building to building, depending upon a number of variables:

- The applicable legislation, criteria, standards and guidelines
- Is the gym located on a slab at ground or a suspended slab
- Whether the receiver is above or below the gym
- The column spacing within the building
- The thickness of the slab
- Whether the slab is pre or post-tensioned concrete
- Whether a suspended ceiling is within the gym or the receivers occupancy
- The hours that the gym operates and the activities undertaken

The above list is not exhaustive, it merely demonstrates the importance of investigating each gym on a case-by-case basis to ensure the most appropriate and feasible acoustic solution is achieved.

Regupol Australia works with Acoustic Engineers nationwide to provide you with the most efficient and cost effective solution for your gym.

Contact the Regupol Acoustic Team for acoustical performance values and further advice.

Note: This is a guide only to selecting the right product for your application. For high traffic applications it is recommended to use the thicker product option. It is recommended that you check with one of your Regupol Team Members for confirmation of the right product for your area. Please check the fire and slip classifications for your building to match with the everroll® rubber flooring material type that is suitable for your project - see downloads www.regupol.com.au

Design Centre

Perhaps the most dynamic aspect of **everroll®** is the way it stretches your mind. With so many colour tones, textures and effects, it offers a wealth of opportunities quite unlike other flooring systems.

Our design and product team can work with you to open up further possibilities with the ability to add logos and inlays to your uniquely designed floor. We can even arrange to create a unique blend of colours using the colour selector below.

So talk to us and discover how **everroll®** can floor you.
